PROJECTS

Snake Game | GITHUB Aug 2025

- Created a desktop-based Snake Game using Java AWT and Swing with an engaging, interactive interface and smooth motion control.
- Coded logic for real-time movement, collision checks, scoring, and adaptive speed variations to enhance gameplay.
- Utilized OOP and event-driven techniques for efficient handling of user input and game state transitions.

Velo Rapido: Bike Rental | GITHUB Mar 2025

- Built a full-stack web system enabling online bike reservations, payments, and centralized management through an admin panel.
- Structured backend workflows in PHP and MySQL for tracking inventory, scheduling maintenance, and generating reports.
- Styled a responsive interface with Tailwind CSS to support users and admins with real-time updates.

TRAINING

Data Structure and Algorithm Training - Hitbullseye | Certificate Jul 2025

- Strengthened understanding of algorithmic concepts and optimized coding techniques for efficient problem-solving.
- Practiced hands-on exercises involving recursion, sorting, and dynamic data handling to build strong logical foundations.
- Improved technical reasoning and adaptability for software development challenges and interviews.
